Art Unit: 3654

Applicant's affirmation of the election without traverse of claims 29, 30, 36 in the reply filed on 6/18/04 has been acknowledged.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 29 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ebner et al (US 5788176) in view of DE 2729280.

Ebner et al discloses an apparatus having substantially all the claimed features including a frame 10, force limiting means/torsion bar 30, and spool 12. Elements such as 32 and 70 are made from plastic/resin. It is old and well known to use plastic/resin material instead of metal when the plastic/resin meets strength requirements to reduce weight and manufacturing costs, and eliminate corrosion. DE '280 discloses a seatbelt device having plastic frame members 2, 3, 8, 9. In view of the prior art as a whole and of the elements of Ebner et al already made from plastic, it would have been obvious to a person having ordinary skill in the art to further make the frame of Ebner et al from plastic/resin if the plastic/resin can meet the strength requirements ("first level pull") to obtain the above advantages, i.e. to reduce weight and manufacturing costs, and eliminate corrosion. Since the FMVSS 209 is a Federal safety standard related to seatbelts and the devices of Ebner et al and DE '280 are deemed to inherently meet the standard. It should be noted that the first level of force in Ebner et al is less than the force level that the frame can withstand; therefore, it would have been obvious to a

Art Unit: 3654

person having ordinary skill in the art to make the plastic/resin frame such that it can also withstand a force higher than the first level of force.

Claim 36 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ebner et al (US 5788176) in view of DE 2729280 as applied to claims 29 and 30 above, and further in view of DE 3244204.

DE '204 discloses a retractor frame 1 having a single lower mounting member 6. It would have been obvious to a person having ordinary skill in the art to provide the apparatus of Ebner et al modified as above with a single lower mounting member as taught by DE '204 to conveniently mount the retractor to a mounting surface via a single mounting member.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 29, 30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 6419178. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art that claims 29 and 30 are encompassed in claims 1-16 of the above patent. Since the FMVSS 209 is a Federal safety standard related to seatbelts and the device claimed in the above patent are deemed to inherently meet the standard.

Claim 29, 30, 36 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6722601 in view of Ebner et al (US 5788176). Claims 1-9 of the above patent disclose substantially all the claimed features. Ebner et al is cited to show the old and well known torsion bar. It would have been obvious to a person having ordinary skill in the art to provide the apparatus of the above claims 1-9 with a torsion bar as taught by Ebner et al to absorb energy as is old and well known in the art. Since the FMVSS 209 is a Federal safety standard related to seatbelts and the devices claimed in the above patent and in Ebner et al are deemed to inherently meet the standard.

Applicant's arguments filed 11/16/05 have been fully considered but they are not persuasive.

Page 5

As noted in the rejection above, since the first level of force in Ebner et al is less than the force level that the frame can withstand, it would have been obvious to a person having ordinary skill in the art to make the plastic/resin frame such that it can also withstand a force higher than the first level of force.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Q. Nguyen whose telephone number is (571) 272-6952. The examiner can normally be reached on Monday, Tuesday, Thursday, and Friday, from 7:00 AM to 4:30 PM. The examiner can also be reached on alternate Fridays.

Application/Control Number: 10/631,267 Page 6
